

Project Documentation

Project Title: Social Media Campaign Performance Tracker

Internship Track: Data Science & Analytics (DS)

Task Number: 02

Organization: Future Interns

1. Introduction

This documentation describes the workflow and analysis performed for Task 2 of the Data Science & Analytics internship at Future Interns. The project focuses on evaluating social media advertising campaign performance using data-driven insights.

2. Business Problem

Businesses invest heavily in social media advertising but often lack clarity on which campaigns generate the best results. The challenge is to analyze performance metrics and optimize ad spend to maximize engagement and ROI.

3. Data Description

The dataset includes campaign-related attributes such as platform, impressions, clicks, engagement, ad spend, conversions, and revenue generated.

4. Data Cleaning and Preparation

- Removed missing and duplicate records
- Standardized column names and data formats
- Calculated key performance indicators (CTR, CPC, ROI)

5. Analysis Performed

- Platform-wise performance comparison
- Campaign-level KPI analysis
- Ad spend versus revenue analysis
- ROI-based campaign ranking

6. Dashboard Design

An interactive dashboard was created to visualize KPIs, trends, and comparisons. Filters were added for platform and campaign selection to enhance usability.

7. Key Insights

- Some campaigns achieved higher ROI with lower spending
- Instagram campaigns showed better engagement rates
- High CTR campaigns resulted in better conversion outcomes

8. Recommendations

- Allocate more budget to high-ROI campaigns
- Optimize ad creatives for campaigns with low CTR
- Continuously monitor campaign performance metrics

9. Skills Gained

Marketing analytics, KPI analysis, dashboard storytelling, and data-driven decision making.

10. Conclusion

This project demonstrates how data analytics can significantly improve social media marketing effectiveness by guiding informed business decisions.
